

Figure A3: Marginal effect of exposure to elite social networks implied from quadratic specification

Notes: This graph plots the densities of P_{ics} in the low SES (dotted line) and high SES samples (dot-dashed line). It also plots the marginal effect of an increase in P_{ics} on the probability of enrolling in an elite degree as a function of P_{ics} as implied by estimates of β_{11} and β_{12} in equation (??). The marginal effect in the low SES (high SES) sample is plotted as a solid (dashed) line. The estimates of these coefficients are reported in Column (5) of Table 3.
