

Figure A4: Marginal effect of exposure to elite social networks: allowing for interaction between peer effect and middle school GPA

Notes: This graph plots the marginal effect of an increase in P_{-ics} on the probability of enrolling in an elite degree as a function of middle school GPA. The predictions are based on the benchmark specification regression model augmented additionally with the interaction between GPA and P_{-ics} . The marginal effect in the low SES (high SES) sample is plotted as a solid (dashed) line.
