

Table A2: Oaxaca Binder decomposition of the SES gap in elite degree enrolment

	SES gap in characteristics		SES gap in coefficients	
	Gap	Contribution	Gap	Contribution
Fraction of elite peers	-0.015*** (0.002)	7.2%	-0.010*** (0.003)	4.8%
Student's middle school GPA	-0.050*** (0.001)	24.2%	-0.140*** (0.005)	67.6%
Fraction of own elite parent	-0.116*** (0.011)	56.0%	0.022*** (0.003)	-10.6%
<i>Mother's highest education level (ref = compulsory level)</i>				
High school	-0.001*** (0.000)	-0.5%	-0.003** (0.001)	1.4%
University	-0.013*** (0.005)	6.3%	0.007** (0.003)	-3.4%
<i>Father's highest education level (ref = compulsory level)</i>				
High school	0.000*** (0.000)	0.0%	0.001 (0.001)	-0.5%
University	-0.038*** (0.008)	18.4%	0.020*** (0.006)	-9.7%

Notes: This table reports a selected set of results from the Oaxaca decomposition of the gap in elite degree enrolment between the high SES and low SES groups of students. Specifically, we estimate the equation 1 in the sample pooling both low and high SES children, denoted by $g = L, H$ respectively. See notes to Table 2 for description of the regression and controls. For each covariate X_{ig} included in the model, we construct two objects, reported in the first and second columns of the table respectively. The first, $\Delta(X)$, measures the gap in elite education enrolment between High and Low SES students explained by the gap in average characteristic X between the two groups. That is: $\Delta(X) = \beta_X^p(E^H(X_i) - E^L(X_i))$ where β_X^p is the coefficient associated with variable X in equation 1 estimated in the pooled sample and $E^g(X_i)$, $g = H, L$ is the expected value of X in each sample. The second, $\Omega(X)$, measures the gap in elite education enrolment between High and Low SES students explained by the gap in the effect of characteristic X between the two groups. That is: $\Omega(X) = (\beta_X^H - \beta_X^L)E^p(X_i)$ where β_X^g is the coefficient associated with variable X in equation 1 estimated in the sample of students $g = H, L$. and $E^p(X_i)$ is the expected value of X in the pooled sample.
