

Table A4: Defining "Elite" peers by occupational status and high income

	(1)	(2)	(3)	(4)
A - Low SES students sample				
Proportion of parents w/elite degree	0.013*** (0.003)			0.011*** (0.003)
Proportion of parents w/high prestige		0.004** (0.002)		-0.002 (0.003)
Proportion of parents w/elite income			0.011*** (0.002)	0.008*** (0.002)
<i>Number of pupils</i>	<i>58,610</i>	<i>58,610</i>	<i>58,610</i>	<i>58,610</i>
<i>Number of schools</i>	<i>524</i>	<i>524</i>	<i>524</i>	<i>524</i>
B - High SES students sample				
Proportion of parents w/elite degree	0.040*** (0.008)			0.042*** (0.009)
Proportion of parents w/high prestige		0.011* (0.007)		-0.008 (0.007)
Proportion of parents w/elite income			0.024*** (0.008)	0.005 (0.009)
<i>Number of pupils</i>	<i>20,018</i>	<i>20,018</i>	<i>20,018</i>	<i>20,018</i>
<i>Number of schools</i>	<i>459</i>	<i>459</i>	<i>459</i>	<i>459</i>

Notes: Data source, Norwegian administrative data. Sample of students ending middle school and entering high school between 2002-2010. Dependent variable is indicator for studying for an elite (graduate) degree. Estimates of elite status defined by education (our benchmark specification - column 1); occupational prestige (column 2) and elite income (column 3). Column 4) includes all three measures of elite. High prestige is defined as working in a STEM profession, as a lawyer or a doctor. Elite income defined as household income in the top 5% of all high school parents in the sample (or the top 2-3% of the population). Results for low and high SES in Panels A) and B) respectively. Model controls for student Norwegian born, gender, middle school GPA, mother and father education and income in year before high school entry and fixed effects for school and year. Standard errors clustered at school level.
