

FIGURE 7. TOTAL GRANTS, LOANS, AND EARNINGS BY DISTANCE TO THE AUTOMATIC ZERO EFC THRESHOLD

Notes: See Figure 2 notes for sample description. Each marker represents average cumulative grant aid (panels A and B), federal loans (panels C and D), or earnings (panels E and F) received by students over the duration of years in which they are observed within a given \$1,000 AGI bin. Amounts are summed over all years in which a given student is observed (between five and seven years). Standardized AGI represents the distance from the automatic zero EFC cutoff in the year of college entry. Earnings are limited to those received in UI-covered jobs in Texas. Larger circles represent a larger underlying sample size. All dollar amounts are adjusted to represent constant 2013 dollars.

bachelor's degree within four years (a 10 percent increase relative to the mean completion rate for barely ineligible students) and 3.3 percentage points more likely to graduate within five and six years of entry (representing 11 and 8 percent increases, respectively). The estimated impact on FTIC students' probability of graduation within seven years is significant at the 10 percent level and similar in magnitude to estimated effects on the five- and six-year horizons, but because we only observe
