

TABLE 4—DISCONTINUITIES IN COLLEGE ENROLLMENT RATES AT DIFFERENT INCOME ELIGIBILITY THRESHOLDS, BY SUBGROUP OF APPLICANTS

Treatment sample (Income eligibility thresholds)	Fee waiver (L0/No grant)		€1,500 allowance (L1/L0)		€600 Increment (L6/L5 to L2/L1)	
	Baseline mean (1)	Nonparametric estimates (2)	Baseline mean (3)	Nonparametric estimates (4)	Baseline mean (5)	Nonparametric estimates (6)
<i>Panel A. By year of application</i>						
2008 applicants	0.753	0.002 (0.015)	0.780	0.033*** (0.009)	0.769	0.009 (0.006)
2009 applicants	0.782	0.002 (0.013)	0.788	0.025*** (0.008)	0.777	0.012* (0.006)
2010 applicants	0.778	−0.001 (0.013)	0.789	0.025*** (0.008)	0.778	0.003 (0.007)
<i>Panel B. By gender</i>						
Females	0.768	0.012 (0.009)	0.789	0.023*** (0.006)	0.773	0.006 (0.005)
Males	0.780	−0.006 (0.014)	0.782	0.034*** (0.007)	0.778	0.010 (0.007)
<i>Panel C. By level of study</i>						
First year	0.761	−0.001 (0.016)	0.755	0.043*** (0.008)	0.740	0.007 (0.010)
Second year	0.855	0.008 (0.014)	0.835	0.021*** (0.008)	0.841	0.013* (0.007)
Third year	0.742	0.005 (0.018)	0.795	0.021** (0.010)	0.771	0.006 (0.007)
Fourth year	0.711	−0.010 (0.023)	0.741	0.042*** (0.016)	0.731	−0.001 (0.012)
Fifth year	0.750	0.004 (0.027)	0.776	0.017 (0.017)	0.749	−0.003 (0.012)
<i>Panel D. By Baccalauréat percentile rank</i>						
First quartile	0.740	−0.002 (0.018)	0.748	0.034*** (0.011)	0.746	0.005 (0.009)
Second quartile	0.767	−0.012 (0.020)	0.791	0.040*** (0.011)	0.783	0.008 (0.008)
Third quartile	0.803	0.004 (0.014)	0.813	0.030*** (0.008)	0.814	0.006 (0.007)
Fourth quartile	0.835	−0.000 (0.015)	0.847	0.018* (0.009)	0.843	0.011 (0.007)

Notes: The table reports the estimated discontinuities in the college enrollment rates of several subgroups of grant applicants, at different income eligibility thresholds. Each coefficient comes from a separate regression where the running variable is the applicant’s relative income-distance to the eligibility threshold. The window size for the relative income-distance to cutoff is ± 0.20 for the L0/No Grant cutoffs, ± 0.16 for the L1/L0 cutoffs and ± 0.06 for the L6/L5 to L2/L1 cutoffs. Columns 1, 3, and 5 report the mean value of the dependent variable above the cutoffs. Quartiles of *Baccalauréat* percentile rank are computed separately for each year of application and level of study. The nonparametric estimates use the edge kernel, with bandwidths computed following Imbens and Kalyanaraman (2012). Optimal bandwidths are computed separately for each outcome and sample. Robust standard errors are shown in parentheses.

***Significant at the 1 percent level.
**Significant at the 5 percent level.
*Significant at the 10 percent level.
