

TABLE 4—AVERAGE TREATMENT EFFECTS ON COLLEGE EXPECTATIONS AND NONMERIT EFFORT (ITT)

	Observations	Control mean	Model 1	Model 2
<i>College expectations</i>				
Planning to attend college	2,146	0.680	0.041 [0.044]	0.042 [0.047]
Planning on four-year college	2,146	0.465	0.025 [0.420]	0.021 [0.494]
Planning on two-year college	2,146	0.216	0.016 [0.580]	0.021 [0.456]
Planning full-time college	2,144	0.565	0.055 [0.062]	0.055 [0.055]
<i>Steps to college</i>				
# college support prog. participated in	2,146	0.463	0.148 [0.038]	0.130 [0.063]
# colleges applied to	2,146	2.354	0.309 [0.036]	0.286 [0.044]
First-choice college is highest prestige	1,920	0.140	−0.029 [0.392]	−0.025 [0.489]
<i>Financial aid and college cost (senior year)</i>				
Completed FAFSA	2,129	0.519	0.044 [0.032]	0.044 [0.033]
Applied for scholarships	1,461	0.596	0.079 [0.090]	0.070 [0.136]
Awarded scholarships	808	0.393	0.066 [0.003]	0.059 [0.029]
Intends to use scholarships	1,461	0.589	0.095 [0.010]	0.077 [0.014]
Greatest roadblock to college is cost	2,135	0.557	−0.001 [0.952]	−0.007 [0.731]
<i>Summer melt</i>				
Planned on college, but did not enroll	2,146	0.528	0.047 [0.098]	0.047 [0.104]
Planned on four-year college, but enrolled in two-year college	2,146	0.135	0.021 [0.434]	0.024 [0.370]
Lagged dependent variable (i)				X
Student covariates and missing indicators (i)				X

Notes: The table reports average treatment effects from OLS estimation of equation (1). Each coefficient is from a separate regression. We report in brackets the *p*-values from RI using 1,000 replications. The number of observations drops considerably relative to that in Table 3 because of the survey response rate (see text discussion). See additional notes to Table 3.

of attending college—both their overall expectation and especially their expectation of attending college full-time.

Mixed effects emerge on students’ finance-related preparations and perceptions. Students were more likely to fill out the FAFSA (a requirement to receive scholarship funds), but the program had no effect on their concerns about the cost of college. This may be because, while the program reduced costs for many students, the frequent discussion of college costs in the communication from TDP program administrators may have raised more attention to costs and created concerns that students did not originally have.

In a descriptive analysis, 56 percent of the treatment students reported that TDP led them to work harder (39 percent reported no change and five percent reported
