

TABLE 3—DESCRIPTIVE STATISTICS OF INCOMING STUDENTS IN PUBLIC HIGHER EDUCATION INSTITUTIONS

	2010	2011	2012	2013	2014	2015	Total
Public school	0.54 (0.499)	0.55 (0.498)	0.57 (0.496)	0.57 (0.494)	0.60 (0.490)	0.63 (0.483)	0.58 (0.494)
Percent non-missing	69.8	88.3	89.3	97.1	96.8	97.4	
PS non-White (PSNW)	0.24 (0.426)	0.27 (0.442)	0.29 (0.452)	0.31 (0.461)	0.34 (0.474)	0.36 (0.480)	0.30 (0.460)
Percent non-missing	74.1	87.9	88.5	94.0	95.8	97.1	
PS low income (PSLI)	0.07 (0.255)	0.12 (0.321)	0.10 (0.304)	0.13 (0.340)	0.15 (0.354)	0.16 (0.363)	0.12 (0.330)
Percent non-missing	63.5	83.3	84.2	90.4	92.1	93.1	
Out-of-state	0.10 (0.301)	0.09 (0.289)	0.09 (0.293)	0.10 (0.295)	0.10 (0.298)	0.10 (0.303)	0.10 (0.297)
Percent non-missing	73.1	79.3	80.2	85.4	88.9	90.9	
Grade	1.13 (0.930)	1.15 (0.879)	1.16 (0.891)	1.18 (0.948)	1.29 (1.013)	1.29 (0.961)	1.21 (0.943)
Percent non-missing	65.1	76.5	78.3	83.5	87.2	89.2	
N applications	9.23 (12.40)	13.25 (16.74)	16.07 (25.32)	17.63 (22.25)	19.87 (23.65)	19.77 (22.76)	16.09 (21.46)
Spots	91.53 (121.53)	97.87 (139.86)	95.36 (128.37)	98.52 (132.35)	95.60 (120.75)	92.93 (115.40)	95.31 (126.60)
Observations	362,634	370,123	392,865	383,410	381,464	391,582	2,282,078

Notes: This table plots descriptive statistics of the main outcomes. The first line for each outcome corresponds to the mean. Standard errors are reported in the second line in parentheses. The third line reports the percentage of non-missing values for the respective variable relative to the total number of observations in the population. PS stands for students that attended high school in a public institution, Low income for individuals from families of total income up to 1 minimum wage and Out-of-state for students that moved states to attend college. Grade is the average of the student standardized grade at the ENEM exam, N Applications is the average number of applications by program and Spots is the average number of vacancies by program. Observations are the total number of first-year students in my main sample of analysis.

families with a total income of less than one minimum wage, and it comes from the ENEM questionnaire. Note that the income criterion used in the AA law is different: family per capita income of less than 1.5 minimum wage. My definition of low income here includes only substantially poorer individuals. There are two reasons why I use a more targeted measure of income. First, around 75 percent of incoming students in federal institutions in 2012 belong to families that fit the AA law target of 1.5 minimum wages of per capita income or less. Since my goal is to understand whether AA increased enrollments of the most vulnerable students, the AA-law income threshold seems excessively broad.¹⁹ Second, due to data limitations, I cannot construct comparable measures of per capita family income for years 2010 and 2011, and, therefore, have to use total family income. The student is defined as from out of state if the reported state of residence at the ENEM questionnaire (during the final year of high school) is different from the one where the individual attends higher education, reported in the CES. The information on grades is an average of

¹⁹ According to the Brazilian National Household Survey of 2012 (PNAD), 10 percent of individuals belong to families with less than one minimum wage of family income (the threshold I use to construct the low-income variable) and 72 percent belong to families with per capita income that fit the AA law target of 1.5 minimum wages or less.
