Notes: The samples are constructed from the AGLAE administrative dataset, which covers the universe of applicants to need-based grants awarded through the French *Bourses sur critères sociaux* program for the period 2008 to 2010. Only applicants who listed university degree programs on each of their preregistration choices, who submitted their application before July and whose FNA score does not vary across preregistration choices are included. The “fee waiver” treatment sample (column 1) includes applicants whose parental income is within ± 20 percent of the eligibility thresholds between no grant and a level 0 grant (which consists of a fee waiver). The “1,500 euros allowance” sample (column 2) includes applicants whose parental income is within ± 16 percent of the income thresholds between level 0 and level 1 grants, where students (who already qualify for the fee waiver) become eligible for an annual cash allowance of 1,500 euros. The “600 euros increment” sample (column 3) includes applicants whose parental income is within ± 6 percent of the income thresholds between consecutive levels of grant in the level 1 to level 6 range, where the amount of annual cash allowance increases by 600 euros on average. The applicants’ percentile rank on the *Baccalauréat* high school graduation exam was retrieved from the OCEAN dataset covering the period 2003 to 2010. Information on college enrollment comes from the SISE dataset, which includes all students registered in a French public university in academic years 2008–2009 through 2010–2011. All amounts are expressed in 2011 euros. Standard deviations are in parentheses.
