

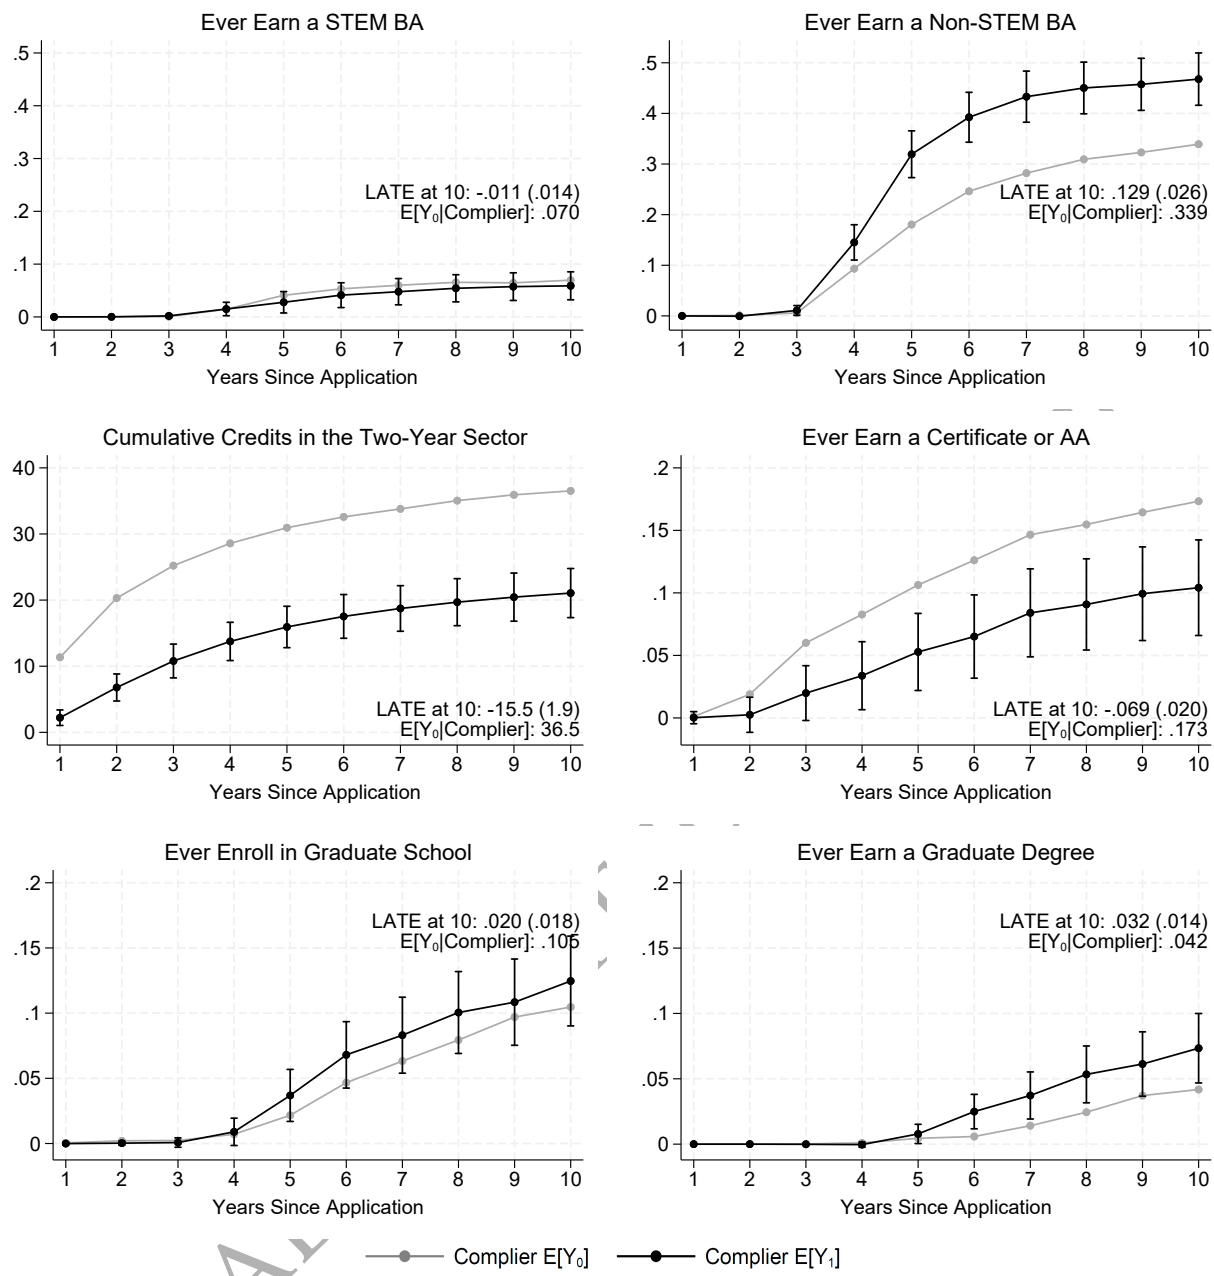

Figure 7: Impacts on Educational Attainment: Majors, Two-Year Credits, and Graduate School

Notes: The gray dots in each plot show the mean outcome of compliers who fall just below the admission cutoff (untreated) at each year since application, and the black dots show the mean outcome of compliers who fall just above the cutoff (treated), which is the untreated mean plus the LATE. The estimates come from the main fuzzy RD specification described in Section 2.4, estimated separately for each year since application. STEM definition comes from U.S. Department of Homeland Security (2016). See Figure A.7 for the reduced form RD plot corresponding to each outcome measured at 10 years.
